SUMMARY

Full-Stack Engineer with 4.5 years building event-driven backend systems in Node.js/NestJS and TypeScript, with React and Next.js frontends. Currently responsible for distributed job scheduling and transactional payout flows across a 20+ service platform communicating over RabbitMQ. Comfortable owning a service end to end — schema, API, messaging, tests and the admin UI on top of it.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL, C

Backend: Node.js, NestJS, Express, REST API design, Microservices, RabbitMQ, Socket.IO, JWT & OTP authentication, Joi validation, i18n

Frontend: React, Next.js, Redux Toolkit, Ant Design, HTML/CSS, jQuery

Data: MySQL, MongoDB, Oracle, Sequelize ORM

Cloud & Tooling: AWS (EC2, S3), Jest unit testing, CI/CD pipelines, Git, GitHub, Bitbucket

Concepts: Distributed job scheduling, message-driven architecture, idempotency, transactional integrity, OOP, SOLID, data structures & algorithms

EXPERIENCE

Intelliist Technology Pvt Ltd — Full-Stack Engineer

Oct 2025 – Present

B2B Channel Loyalty & Rewards Platform — client: mjunction · multi-tenant, configuration-driven, 20+ NestJS microservices over RabbitMQ

- Designed and shipped a multi-organisation job scheduler that replaced a legacy polling runner: leader-elected dispatcher, four-level concurrency limits, fair-share dispatch with priority and aging, retry and dead-letter handling, and a legacy bridge that allowed a **zero-downtime cutover**. Shipped with a 36-test unit suite.
- Hardened the point-to-cash redemption flow — moved point reversal inside the status-change transaction and added idempotent guards, **eliminating double-refund exposure** and giving every redemption a complete, auditable status history.
- Built and extended the authentication and profile microservice (JWT, OTP over short-lived purpose tokens, Sequelize/MySQL, Joi, i18n), including OTP-verified mobile-number change and event-driven automatic tier assignment on self-registration.
- Built admin operations modules in Next.js, Ant Design and Redux Toolkit for redemption approvals, sale-data verification and live order-status monitoring.

Redoq — React.js Developer

May 2025 – Oct 2025

Quick Studio — visual application builder (no-code platform)

- Engineered a drag-and-drop application builder in React that lets non-technical users design, configure and export production-ready frontend applications.
- Built a library of configuration-driven UI components with dynamic page and navigation generation, plus visual form and workflow configuration with validation rules and conditional logic.
- Implemented REST API integration mapping so generated screens run against live data, and a one-click export pipeline producing responsive, device-adaptive builds.

Atomax Techservice (OPC) Pvt Ltd — Full-Stack Developer

Jun 2024 – Apr 2025

- Built a restaurant reservation and order-management platform (React, Node.js/Express) with real-time seat allocation and group-booking logic to maximise table utilisation.
- Developed REST APIs for a medical travel and services platform, integrating Razorpay payments and live location tracking across the full booking → payment → trip-completion lifecycle.
- Deployed both products to AWS and Render behind CI/CD pipelines, and built the operations dashboard used for real-time service monitoring.

Arodek Technology Consulting Pvt Ltd — Software Developer

Mar 2022 – May 2024

- Built a React and MongoDB patient registry that replaced paper record-keeping for doctors and assistants, with Chart.js dashboards that let clinical researchers run their own cohort analyses instead of raising data requests to IT.
- Built REST APIs on Node.js and Oracle DB for *Gurukul*, a training tracker serving hierarchical role-based dashboards to state and regional heads, with Firebase push notifications for session and progress alerts.
- Developed a region-wise stock inventory system with cross-state transfers, automated alerts and audit trails, integrated with SAP Business APIs for centralised monitoring and state-wise compliance.
- Built an OCR automation pipeline in React and Node.js alongside the AI/ML team, replacing manual document entry for SAP customers and cutting turnaround time on that workflow.

EDUCATION

B.Tech, Computer Science & Engineering — College of Engineering and Management, Kolaghat (MAKAUT) · CGPA 8.31

2022

RECOGNITION & CERTIFICATION

Employee of the Quarter at Arodek for consistent delivery, and separately commended by the client for delivery quality · **AWS** — Learning and Implementing AWS Solutions (certified).
